GPxX Gyro Stations

Sokkia Corporation introduces its latest series of Gyro Stations, the GPxX series. The GPxX Gyro Station uses SET X series and has wider range of angle accuracy than the previous model; "GPx130R3 series".

The GPxX locates true north with two modes, follow-up measurement and time measurement, and determines 20" azimuth precision without any other aid. This gyro station is designed for roads, railroads, power lines, pipelines, underground construction and other similar long and narrow projects. There are no restrictions by location, weather or time like other surveying solutions.

The GPxX is available in a 1", 2", 3" and 5" model.

The standard items included in the GPxX Standard Set Configurations:

- GPxX Gyro Unit
- SETxX SET X Total Station Unit - including standard accessories
- BDC7 External Battery
- CDC75 Charger and cable for BDC7
- SE32 Carrying Case for Gyro Unit
- DLC1 Remote Trigger
- SC234 Carrying Case for SET X Unit and operator's manual.
